### 3. Password Validity with Error code

ALL

Provide a function with checks the password validity based on validation criteria. Return Error Code 0, if password is valid. Return specific error code if validation fails.

Validation criteria and Error code. Check for validity in the order below and return error code on first instance of failure.

1. Min length - 8, Max length - 31 [Error code 10]

2. Password should be alpha numeric (alphabets and atleast one numeral 0-9) [Error code 20]

3. Atleast one special char from a set # \$ @ % & \_ [Error code 30]

4. No simultaneous repetition of any char (e.g. Password@12 is not valid, but Password@12 is valid) [Error code 40]

If the order of the validation is mixed up, then the testcases will fail
